

cBioPortal

Bioinformatics

(<http://www.cbioportal.org/>)

It enables the exploration of

- Genetics alterations across samples
- Genes
- Pathways

Integrated genomics data types

- ★ Somatic mutations
- ★ DNA copy-number alterations(CNA)
- ★ mRNA and miRNA expression
- ★ DNA methylation
- ★ Protein abundance
- ★ Phosphoprotein abundance

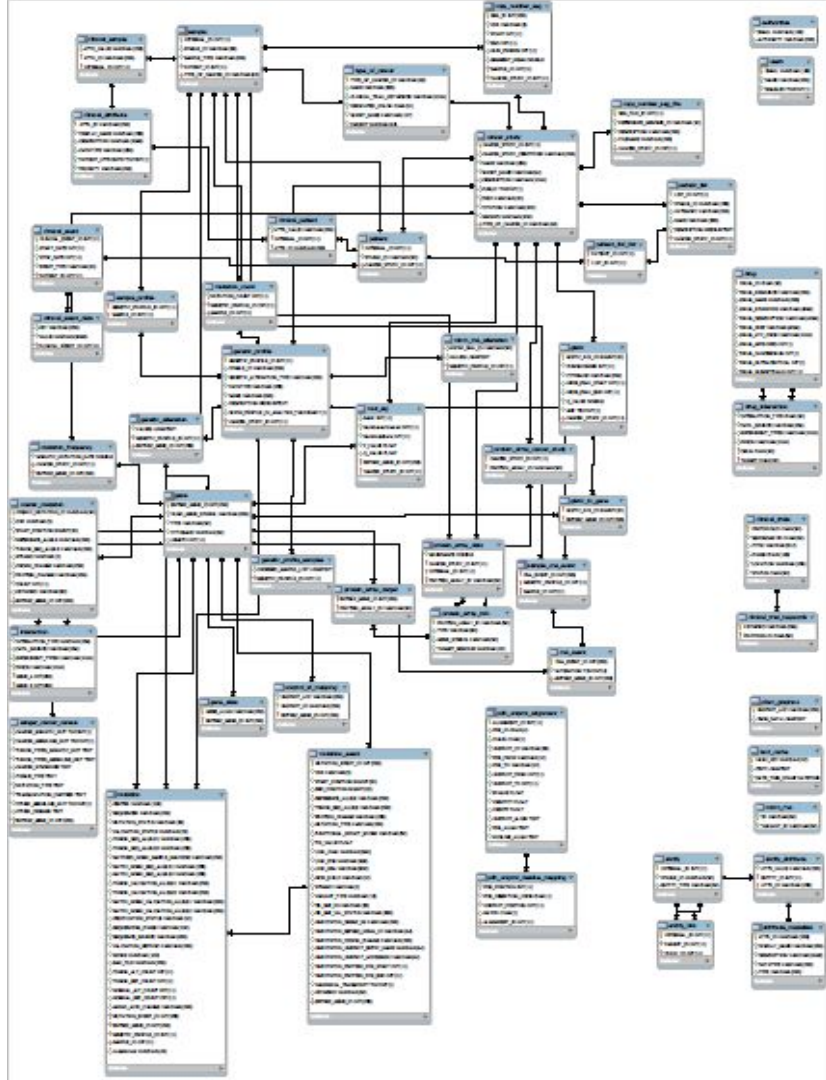

Datasets from

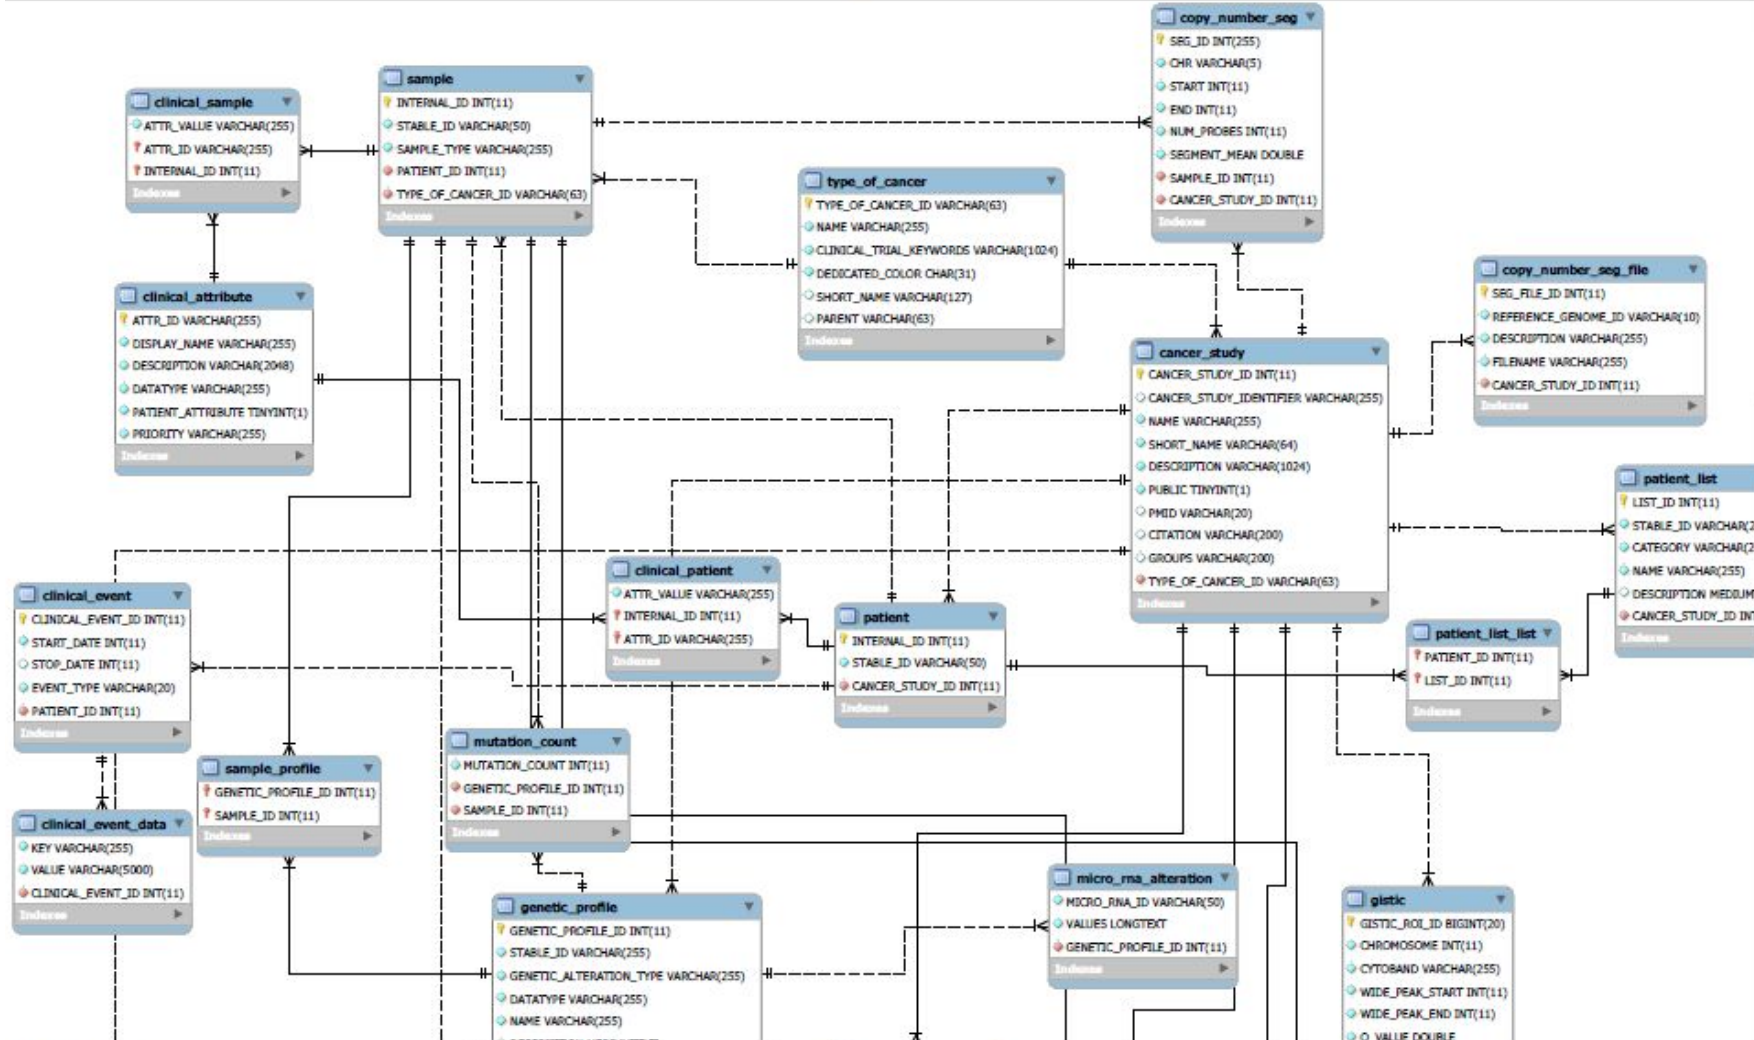

- Published cancer studies
- The Cancer Genome Atlas Project (TCGA)
- International Cancer Genome Consortium (ICGC)
- Cancer Cell Line Encyclopedia (CCLE)

Querying

1. Single Cancer Study
2. Across Cancer Studies
3. Towards Precision Medicine

Entity-Relationship Diagram of cBioPortal

```

Behind the Scene

Default

- ★ mRNA, miRNA (expression), protein (abundance) and phosphoprotein data, z-score = 2 SD from the mean

Correlation Plots

- Pearson, Spearman Correlation
- eg. methylation beta value > estimate for methylation level of CpG locus based on intensity ratio between methylated and unmethylated alleles

Copy-number status

- ❖ Homozygously deleted, heterozygously deleted, diploid, gained (amplification event with few copies), amplified (high copy amplification)

Behind the Scene

Mutual Exclusivity vs. Co-occurrence (An Event)

- Based on log odds ratio (OR) score- likelihood of an event

Let's say, we have two query genes(G1 and G2)

A: # cases altered in both genes

D: # cases altered in none of them

B: # cases altered in G1 but not G2

C: # cases altered in G2 but not G1

$$OR = (A * D) / (B * C)$$

- Significance for relationship each gene pair is determined by Fisher's Exact Test (means not an assumption towards infinity, based on p-value)

Behind the Scene

Mutations (just for nonsynonymous)

- Graphical summary gives position and frequency of all mutations as **Pfam**(Protein family) protein domain(functional regions-e.g binding region)
- Mutations affecting canonical pathways are chosen from **Oncotator**(Cancer Variant Annotation Tool) (annotate human point mutations, insertion and deletions with relevant cancer)
- # mutation at this position in **COSMIC**(Catalogue of Somatic Mutations in Cancer)
- functional impact prediction of missense mutations from **Mutation Assessor**

Behind the Scene

Protein Changes

- Proteomics data available from RPPA (Reverse Phase Protein Assay) platform for 12 TCGA patients
- Protein versus mRNA expression via scatter plot at Plots tab
- Differential analysis for available RPPA data correlation w/genomic alterations
- two sided, two-sample Student's t test to identify differences

Survival

- overall vs. disease-free survival in Kaplan-Meier plot w/ p-values from logrank test.
- Kaplan-Meier plot is an estimation plot

Behind the Scene

Network

- Pathways from Human Reference Protein Database(HRPD)
- Reactome
- National Cancer Institute (NCI)-Nature
- Memorial Sloan-Kettering Cancer Center(MSKCC)
- Cancer Cell Map

all derived from Pathway Commons Project

- ❖ Detailed visualization via Cytoscape
- ❖ gene-centric drug target info from DrugBank, KEGG Drug, NCI Cancer Drugs

DEMO

1-Querying Individual Cancer Studies

Query | **Download Data**

Select Cancer Study: Glioblastoma (TCGA, Nature 2008) 
The Cancer Genome Atlas (TCGA) Glioblastoma project. 206 primary glioblastoma samples.
Raw data via the TCGA Data Portal. TCGA, Nature 2008 [View details](#)

Select Genomic Profiles:
☒ Mutations 
☒ Copy Number data. Select one of the profiles below:
☒ Putative copy-number alterations (RAE, 203 cases) 
☐ Putative copy-number alterations (Consensus, GBM Pathways, 206 cases) 
☐ mRNA expression 

Select Patient/Case Set: Tumors with sequencing and aCGH data  [Build Case Set](#)

Enter Gene Set: Advanced: Onco Query Language (OQL)

CDKN2A CDK4 RB1
Select from Example Gene Sets:
 

1 Select a cancer study

2 Select genomic profiles

3 Define a patient / case set

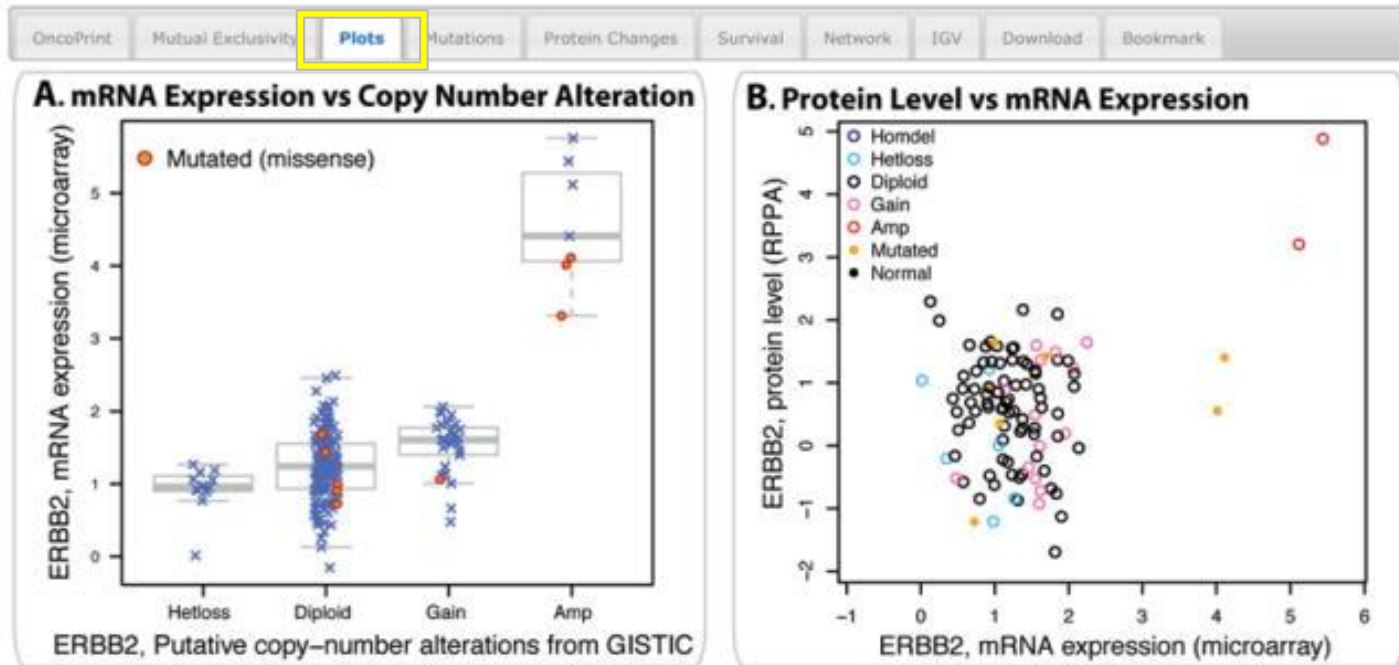

4 Enter genes of interest

HUGO Gene Symbols
Entrez Gene Identifier
Gene Aliases
